EDUCATION

Istanbul Technical University

B.Sc. in Computer Engineering – GPA: 3.87 / 4.00

Istanbul, Turkey

2023 – Present

EXPERIENCE

National Software Certification Center

Part-Time Computer Engineer

Jan 2025 – Present

Turkey

- Administer Linux/Unix servers; manage container orchestration across Docker Swarm and Kubernetes clusters.
- Designed internal LAN architecture: self-hosted DNS with rewrites, master Nginx reverse-proxy nodes, and DMZ segmentation.
- Deployed and maintain self-hosted services (Open WebUI, ShareLaTeX, JupyterHub, AdGuard, Portainer) with automated backup pipelines.

Turkcell

AI & Analytics Intern

Jan 2026 – Feb 2026

Istanbul, Turkey

- Proposed and engineered a product recommendation pipeline for the Pasaj e-commerce platform using SBERT, PCA, and LightGBM with advanced feature engineering.

SnA Consulting

Full-Stack Development Intern

Jul 2025 – Aug 2025

Turkey

- Independently designed and delivered a corporate intranet management system using React, Django REST Framework, and PostgreSQL.
- Integrated Google OAuth 2.0 and implemented a multi-level role-based authorization system.

Hilal Akıncı Kids

IT Member

Jan 2024 – Mar 2024

Turkey

- Managed e-commerce channel synchronization and executed Google SEO optimization strategies.

PROJECTS

feast | Django REST Framework, PostgreSQL/PostGIS, React, K3s, GitHub Actions

Jul 2024 – Present

- Founded and led a technical team; architected the full platform from scratch, overseeing product, branding, and corporate scaling.
- Built REST APIs with Django REST Framework; designed PostgreSQL + PostGIS schema for spatial data handling.
- Established CI/CD via GitHub Actions; migrated infrastructure from Render to Hetzner Cloud with K3s clusters on bare Ubuntu instances and load-balancer traffic management.
- Transitioned object storage (AWS S3 → Cloudflare R2) and transactional mail (AWS SES → Resend).

LingUI | Django, Go, Redis, WebSockets, Gemini API, Celery

Dec 2025 – Present

- AI-powered website translation service with one-line code integration, supporting 100+ languages.
- Three-layer caching system (client-side → Redis → PostgreSQL) minimizes AI API calls; Go WebSocket server with a Celery-backed async translation pipeline.

Internal Network Architecture | Docker Swarm, K3s, Nginx, AdGuard, Grafana

NSCC, Jan 2025 – Present

- Designed and deployed the organization's full internal infrastructure: Portainer, Nginx reverse proxies, Open WebUI, ShareLaTeX, JupyterHub, AdGuard, and Grafana.
- Implemented DNS rewrites, DMZ segmentation, automated backup solutions, and container orchestration across Docker Swarm and Kubernetes clusters.

Neuromorphic Computing Research | Python, Scikit-learn

NSCC, Sep 2025 – Present

- Optimizing and benchmarking a novel brain-inspired data clustering algorithm against state-of-the-art competitors, with comprehensive performance testing and comparative analysis.

- Developed a desktop AI service that monitors internal service logs and delivers natural-language analysis; users can instantly debug uploaded log files via conversational LLM integration.

- Built a high-efficiency Turkish address-parsing solution using Character-level CNN instead of heavy transformer models (BERT), achieving competitive accuracy at significantly lower latency.

TECHNICAL SKILLS

Programming Languages: Python, C, C++, JavaScript, SQL

Backend Development: Django, Django REST Framework (DRF), FastAPI, Flask

Frontend Development: React, Redux, React Router, Tailwind CSS, HTML5, CSS3, JavaScript ES6+

DevOps & Infrastructure: Docker, Nginx, Portainer, Harbor, Cloudflare, GitHub Actions, CI/CD Pipelines

Cloud Platforms: Amazon Web Services (AWS), Google Cloud Platform (GCP), Google AI Studio, Hetzner

Databases & Caching: PostgreSQL, PostGIS, MySQL, Redis, Database Design & Optimization

Message Queues & Workers: Celery, Redis Queue, Asynchronous Task Processing

Networking & Systems: DNS Configuration, DMZ Architecture, WebSockets, RESTful APIs

AI & Machine Learning: NLP, Character-level CNN, Gemini API, Neuromorphic Computing, Scikit-learn, PyTorch, TensorFlow, OpenCV

Tools & Technologies: Git, GitHub, Linux/Unix, MCP (Model Context Protocol)

Architecture Patterns: Microservices, Three-tier Caching, Multi-region Deployment, Real-time Systems

LANGUAGES

Turkish: Native **English:** Advanced (academic & professional proficiency)
